

Black outline = default thresholds ($F_{st} < 0.05$ / > 0.15)

Figure 3 consists of three stacked bar charts, each representing a different low threshold condition for F_{ST} : $F_{ST} < 0.02$, $F_{ST} < 0.05$, and $F_{ST} < 0.07$. The x-axis for all charts is 'High connectivity threshold (F_{ST})' with values 0.1, 0.15, and 0.2. The y-axis represents the proportion of three categories: red (bottom), orange (middle), and blue (top). The total height of the bars increases as the high connectivity threshold increases, and as the low threshold condition becomes more stringent (from 0.07 to 0.02).

Low threshold: $F_{ST} < 0.02$	Low threshold: $F_{ST} < 0.05$	Low threshold: $F_{ST} < 0.07$
0.1	0.1	0.1
0.15	0.15	0.15
0.2	0.2	0.2
